STATINTL

Image Enhancer

GR 9-4101

As of Wed. 10 24 Apr 63

The instrument is ready for shipment and they are awaiting disposition instructions. The final report will probably be ready about the end of May which will complete all items on the contract.

participation in the Enhancement Symposium in St. Louis on 11-12 Mar greatly improved his enthusiasm and morale. In spite of the difficulties with image quality, he was able to demonstrate enhancement and it appears this machine is ahead of anything else in the field.

has some excellent ideas regarding improvement of the Quality Meter and hopes to have the opportunity to carry them out. He is doing some in-house research on an extension of the acutance concept to a new criterion which he calls Oxiance. He reports good correlation in preliminary tests between the Oxiance rating and the subjective grading of photo quality.

I was pleased to see this enthusiasm and evidence of Company faith in the work.

Your Action Item: Advise of disposition of machine.
